

Highlights of the 2045 Plan Survey – conducted in July/August 2020

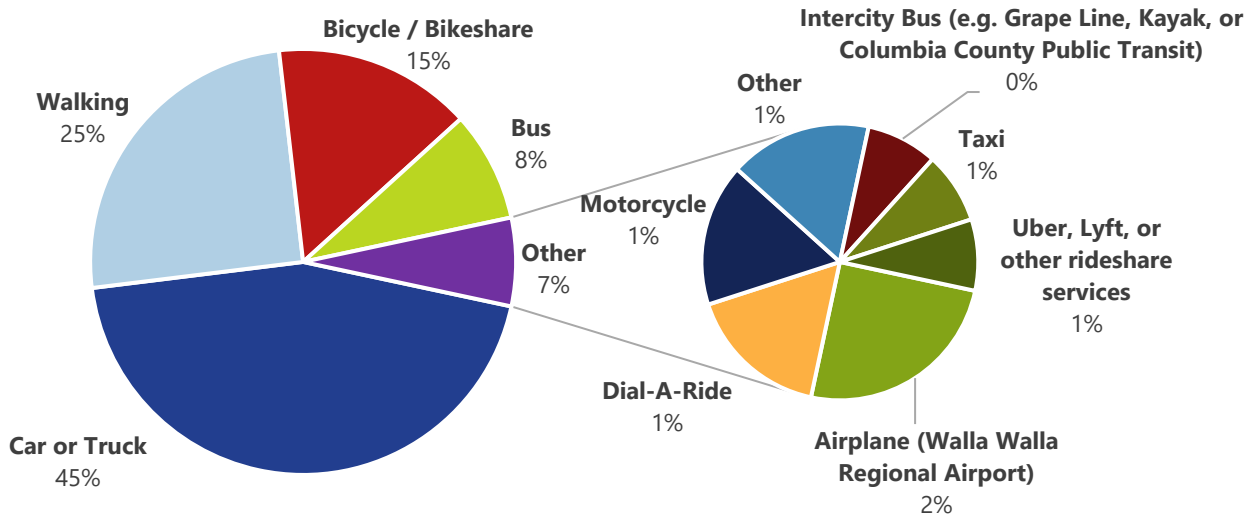

In what part of the region do you live?

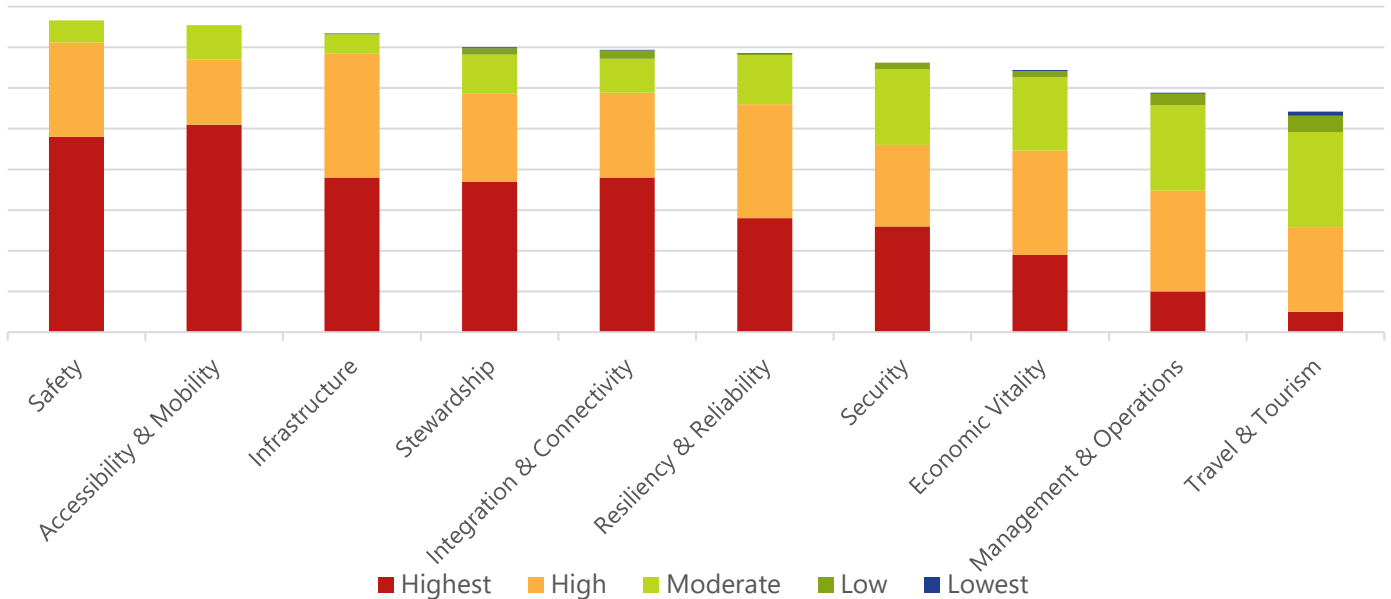

What is your age ?

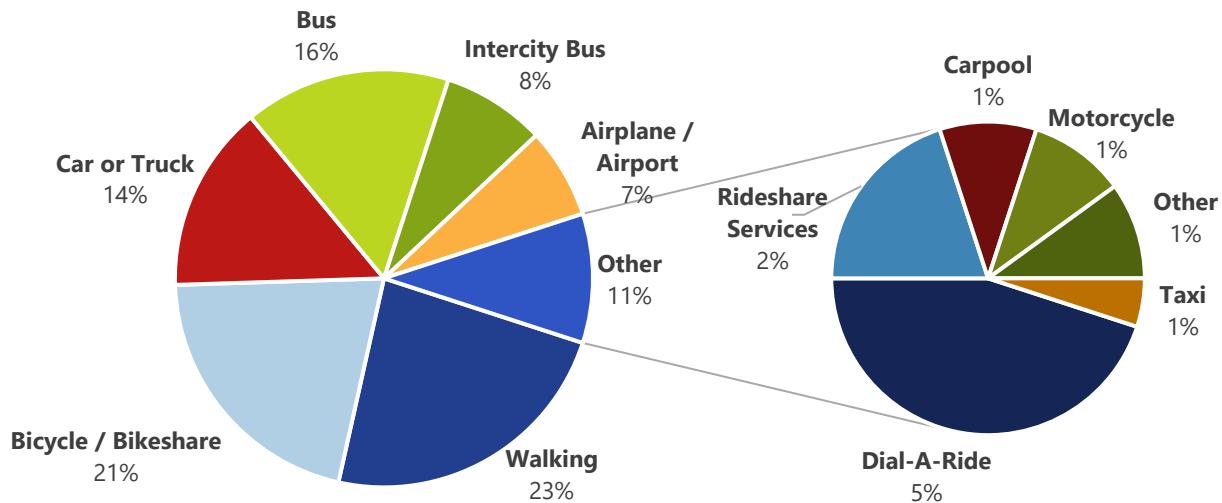

Which transportation modes do you use in a typical week?

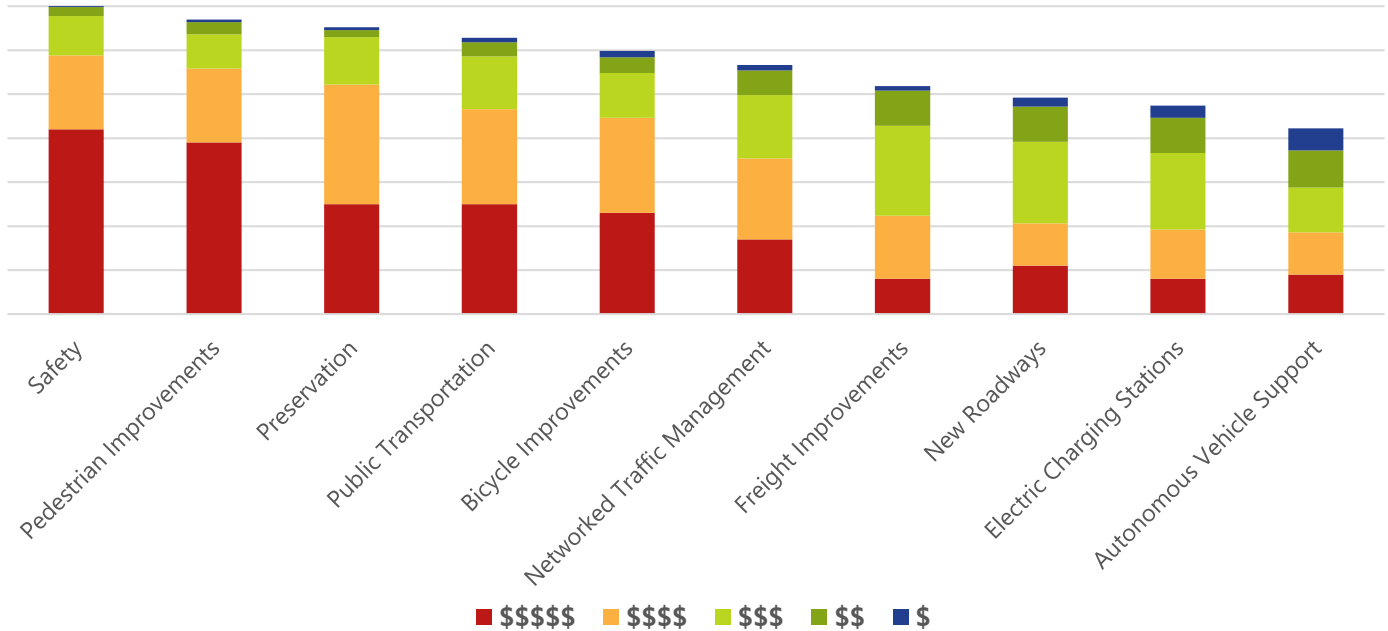

What transportation goals are important to you?

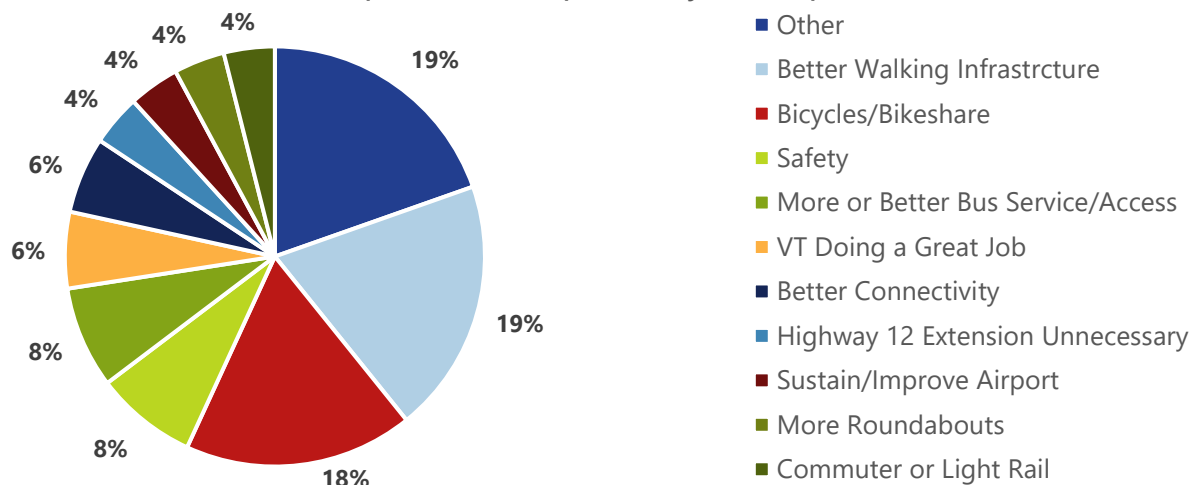

Which modes do you like most and would like to see improved?

How would you spend the limited funding?

What other transportation topics may be important?

Thank you for sharing these additional questions, concerns, and comments!

- biking!
- I think a bike share program would do well here increased walk ability and pedestrian safety
- Spending the \$113 mil on Phase 7 of US12 without reasonable prospect of funding Phase 8 is a waste of money.
- Taxi fare is cost prohibitive
- Wish there were more connected walking loops. Etc to McKinney walking path, along the canal to the trails by the cc, connection to those by veterans park.
- Love the scenic beauty of walking on county roads near town but hate the anxiety of dodging cars and stumbling into the ditch.
- Light rail!!
- Cannot get to the children's museum without knowing where we would be dropped off from rout 6 because each driver is different in where they will deop off and pick up.
- Would be fantastic if we could get a flight to Portland, Oregon Thank you Valley Transit for helping to keep our community safe!
- Walking is my favorite, but I recognize a lot of people have mobility issues to be addressed. Car
- Overall road work is being done. Thank you. More walking paths, bike paths, more bus stops and longer bus hour usage. More county wide services.
- The Walla Walla Regional Airport is very nice to have in a rural community, I hope it can be sustained into the future.
- Great idea to have more charging stations! Bike
- Round-Abouts!!!! More of these, please.
- I am looking forward to biking and walking/hiking with my kids. Add roundabout at plaza way and Dalles military
- Thank you Valley Transit Team! You are greatly appreciated.
- Need to get freight traffic off city streets that go through downtown and past schools. Improve bicycling and sidewalk connectivity especially for north-south connections (Plaza Way, 3rd Avenue, School Avenue, Fern).
- Reduce the number of plans that take travel lanes away from MV's and give them to bicycles that seldom or never use them.
- Please kick the people off the bus who refuse to wear masks.

- One thing I love about Walla Walla is that it's pretty walkable and people tend to drive relatively safely. It makes the quality of life here great and it's something I tell people about when they ask if I like living here.
- Walla Walla Valley Transit is my favorite. I visually impaired and can not drive. I use the bus system to get to work, appointments, and social. Would like them to add more routes, like a Walmart to Plaza Shopping, to Walla Walla Clinic, to Wa-Hi and back to Walmart. Other routes that don't need to go to the Transfer Station.
- Highway 12 extension unnecessary
- Are there any strategies for getting the private sector into partnership agreements? Have you ever floated bonds for financing regionally significant improvements?
- Amtrak type light rail Pendleton, Walla Walla, Tri-Cities, Hermiston
- Really enjoy certain streets downtown being closed and available for outdoor pavilion seating. Very nice! Fixing traffic light timing so that we don't watch the next light change from green to red as our light turns green would make a lot of sense. Very frustrating to sit through 3 or 4 lights in 3 or 4 blocks. Actually, it is maddening and seems to an outsider like a very easy issue to fix. All in all, great job and thanks for all your hard work!!
- encouraging more people to utilize bicycles within towns, by creating a safer environment and more convenient pathways would help not only with transportation, but also with our healthcare
- I would love to see roads throughout the city improved. I would also like to see the Forest Service and counties work to improve the roads into the mountains. Once the national forest is free from snow, you can't drive to various areas without 4 wheel drive as mudders and atvs have ruined the roads for regular cars. This pushes forest use to the same areas resulting in crowding and overuse of areas.
- Improve bicycle routes and safety - especially for kids
- Commute from Pendleton into work in WW, survey doesn't really take that into account at beginning
Thank you for all you do to improve transportation in Walla Walla Valley!
- Public Transportation is essential for individuals with disabilities in our community. 80% of people die with some disability, the disability community represents approximately 20% of a population. These systems, in order to serve them best, need a keen eye on accessibility, lighting, safety, and inter agency communication/synchronization. Increase participation from individuals that routinely use public transportation, or from bicyclists. A deterrent for us in buying a home were the lack of sidewalks in many of the blocks in WW. There needs to be sidewalks (on both sides of the street) in a mile radius from every elementary school in WW (the radius that determines if a child is walking to school or provided a bus). Check out 2nd street as it turns into Abbott. There is a suburb within a mile radius, but without a sidewalk on some of the busier spots on the route to Prospect Point.
- Completion of Highway 12 Phase 7 and 8 is a high priority.
